

Certified Generator Experts

GenSpring Power Inc. is certified to Startup and service Kohler, Briggs & Stratton, Eaton Cutler-Hammer, and Guardian Generac residential generator systems. We are proud to announce that GenSpring Power received the 2007 Outstanding Service Award from Briggs & Stratton and SEDCO Inc. and are now in our 6th year year of business.

Maintenance Plans Available

GenSpring Power also offers a Preventative Maintenance Plan to keep your generator in excellent operating condition. Service plans are available in annual or semi-annual schedules that can be discussed during Startup.

Peace of Mind

Having your home generator system tested and serviced by professionals assures that your generator is installed correctly and ready 24 hours a day.

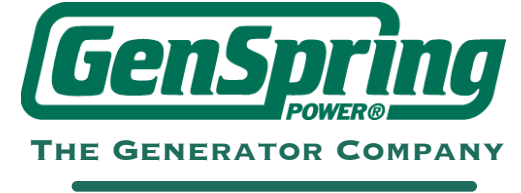

It is comforting to know my generator is ready for the storm.

What is GenSpring Startup?

Once a home standby generator has been installed, testing of the system is needed to ensure the generator is ready for operation. A certified GenSpring professional will perform an overall inspection of the generator and installation.

Why Do I Need Startup?

Due to today's widespread availability of home standby generators, consumers can find many avenues to purchase a generator. Internet purchase, big box stores, electrical supply houses, non-dealer electrical contractors, and professional generator dealers are the most common.

All too often the homeowner or non-dealer electrician may not understand the correct installation and Startup procedures for these generator systems. If Startup and recommended maintenance procedures are not followed, the system may not operate properly and the warranty may not be honored by the manufacturer. Sometimes these deficiencies are not evident for months costing the homeowner more time and money to have the issues resolved.

For your peace of mind, it is very important to have your system examined and tested by an authorized service dealer.

Startup Services We Offer

- Verify correct control wiring between the Generator and the Automatic Transfer Switch
- Verify adequate fuel supply to Generator
- Convert to LP gas if required
- Examine the Generator and engine components prior to operation
- Provide and install the proper size and quality battery
- Verify correct voltage and frequency output and make any necessary adjustments prior to automatic testing
- Perform the Automatic Transfer Sequence by simulating a utility power outage
- Advise customer of the manufacturer's recommended Break-in procedure and perform if requested
- Assist customer with completing all necessary Warranty registration documentation
- Any Warranty related issues found at Startup will be addressed promptly
